Sealing Gasket	XLPE Foam

Discharge Rate

Tap fully open	Approx. 7.5L / min
----------------	--------------------

Closure Threadform

Truncated buttress	(FWL pattern)
--------------------	---------------

General Description

The Wardrum® Cap Tap is intended to provide Wardrum® users with a controllable discharge from Wardrum® containers.

The tap is a tried and tested Waddington & Duval design that has been incorporated into a standard Wardrum® cap. The composition of the tap components and the cap are chemically resistant and compatible with a wide range of chemical solutions. For specific advice on chemical compatibility call the Francis Ward sales team.

The Cap Tap features an integral venting tube that enables non-glug splash free flow and secure seals to prevent dripping.

Correct Use

To ensure correct and efficient operation of the Cap Tap it is important to ensure that when screwed on to the Wardrum® neck the tap nozzle points out through the gate in the handring and that the vent tube points to the rear of the container.

Whilst every attempt has been made to ensure that the information provided in this product information sheet is accurate and reliable Francis Ward Limited cannot accept responsibility for the interpretation of the information provided.

WARDRUM is a registered trademark of Francis Ward Limited
WARDRUM is a patented design No. 881529 & 1297050

WARNING
The Wardrum® Cap Tap is a proprietary design and is only compatible with Wardrum® containers
