

Wardrum®

Cap Torque Adaptor

Product Information Sheet

Composition

Adaptor Aluminium (anodised)

Size

Torque socket 19 mm

General Description

The Wardrum® Torque Wrench Adaptor provides Wardrum® container users with a tool for tightening container caps to the correct UN specified cap torque settings.

The UN package performance tests define cap torque settings for all successfully tested container design types. This torque setting is indicated on the relevant UN container certificate. If you are unsure of the torque setting you should be using please contact the Francis Ward sales team who will be able to advise you.

Correct Use

When using the Torque wrench Adaptor it is important to ensure that it is fully depressed on the cap. This will enable torque to be applied without the risk of the Adaptor slipping off the closure or damaging the closure.

Whilst every attempt has been made to ensure that the information provided on this product information sheet is accurate and reliable Francis Ward Limited cannot accept responsibility for the interpretation of the information provided.
