

# Rollet®

## Think of what the Rollet could do for **your** business...

The Rollet® is **incredibly strong** and also **totally recyclable**, providing long-term savings and environmental advantages. The Rollet® can be transformed into many different formats and can be put to use for an incredible range of purposes. It can be used in a **three-or four-sided assembly**, providing access from the front or back. Available in a range of colours to suit your business application.

### Key focus points:

**Plastic Composition** making it *hygienic*, easy to clean and rust free.

**Modular Design** - panels slot into the base and link together. Can be flat packed for storage or the components stacked inside an assembled unit.

**Multi Shelf Positioning** with a secure top option.

**Easy and Safe** to use - units are lightweight and easy to manoeuvre, with smooth moulded handles and no jagged edges.

**Quiet** - with durable sound-reduction PU castors fitted as standard. These combined with the plastic panels considerably reduces the "rattling" associated with metal cages.

**Lightweight** - just 40 kilograms in its standard height format of 1500.

**Reduce your roll cage fleet wastage** due to theft or loss by having your units manufactured in your corporate colours.

**Logo** moulded into the side of the panels available. (*Optional*).

**Load Capacity** - single Rollet up to 400kg - **Double Rollet** up to 800Kg
